

FLOW chair

DESIGN

Jakob Berg, Denmark

Jakob Berg (1958 -2008) let himself be inspired by any kind of form and shape that caught his eye in order to transform the ideas into functional design. He was born in Roskilde in 1958 and educated as an industrial designer in Denmark. From the early 90'ties to his passing away in 2008 he collaborated with an impressive string acclaimed Danish and international companies as well as receiving several prizes and honors for his innovative designs. A major bulk of his work was dedicated to DANIDA's various furniture projects in Bolivia, Egypt and in Vietnam. Berg had a clear preference for creating his elegant, functional and simple designs in sustainable wooden material of many kinds. He was an early pioneer in the exploration of bamboo in modern designs. For Jakob Berg the concept of beauty was essential and he often said that "without beauty man wouldn't survive a second".
